BOOK TEMPLATES

Pages in Layers

These templates are designed to work in photo editing or drawing programs that work in layers, and accept png files.

IMAGES AND CAPTIONS IN POSITION

IMAGE LAYERS UNSTACKED

TEMPLATE OFF—SHEET PRINTED

These templates are at 300dpi, which is a reasonable standard for inkjet printers, they can be resized to whatever dpi you desire. Resize your images to fit, and copy and paste them into the working file. Move the layers so that the template is on top. When you test the page or save the file in layers, turn off the template later.

Most editing programs permit setting type, and can work with copying and pasting type from word processing programs into text blocks.

I recommend that you save the page files in layers, and also flattened. Although you can print the files as separate files, for ease of printing, they can be converted into jpegs or tiffs and placed into word processing or Acrobat files. Print the odd numbered pages all at once, but unless you trust your printer absolutely, hand feed the even number pages by hand.

10/12 Times Justified
